ATLAS Project Presents:

Futures Forum

October 18, 2011
3:30-4:30 PM
Rm. 2734

Accessibility Technology and the Future of Education

Assistive Technologies are designed to provide accessibility to individuals of all ages and abilities who have physical or cognitive difficulties, impairments and disabilities.

The production of these alternative input devices has raised interesting opportunities and challenges for education, in teaching and learning environment. These issues will be explored in order to inform our future direction at IVC.

Refreshments will be served.

Everyone is invited!
